

TV Advertising Campaign Measurement & Insights

NorthStar Burger Co. - Synthetic Portfolio Case Study | Built to demonstrate campaign measurement, statistical rigor, and data storytelling for a research & insights role.

24.7%	4.49%	3.60%	+0.89 pp
Relative conversion lift	Treatment conversion	Control conversion	Treatment - control

Business Question Did campaign exposure generate measurable incremental impact, and which campaigns and audiences showed the strongest response? Measurement Approach Treatment vs. control comparison of conversion outcomes, followed by campaign and audience segmentation. Statistical significance and confidence intervals were used to distinguish stronger evidence from noisy differences.	Key Finding Overall campaign exposure was associated with a 24.7% relative conversion lift versus the control group (4.49% vs. 3.60%; +0.89 percentage points). Best-Supported Opportunity Late Night among ages 35-44 showed the strongest campaign-audience result: 117.6% relative lift, with a 95% CI of +1.21 to +5.07 percentage points and p = 0.0017.
--	--

Campaign Performance

Campaign	Control conversion	Treatment conversion	Relative lift
Late Night	3.34%	5.04%	+50.7%
Spring Launch	3.52%	4.62%	+31.4%
Family Meals	3.75%	4.43%	+18.4%
Summer Value	3.78%	3.92%	+3.8%

Audience Insights

Audience	Control conversion	Treatment conversion	Relative lift	Evidence
35-44	3.68%	5.20%	+41.4%	Strong (p=0.0021)
18-24	2.78%	3.62%	+30.2%	Not conclusive (p=0.0904)
25-34	4.14%	5.05%	+22.0%	Borderline (p=0.0507)
45-54	3.45%	3.43%	-0.5%	No evidence (p=0.9741)

Recommendations 1. Prioritize the strongest campaign-audience combination for further investment and testing. 2. Treat 35-44 as the clearest audience opportunity, supported by a statistically significant overall lift. 3. Keep testing lower-confidence segments before making major allocation decisions.	What This Demonstrates An end-to-end workflow from treatment/control measurement to segmentation, statistical validation, and concise business storytelling - the core of a research & insights analytics function. Methodology note: This case study uses synthetic data created for portfolio demonstration. Results are illustrative and are not Taiv or advertiser data.
